

S01 round table

This Table is a new proposal we made at the latest 2015 Salone Internazionale del Mobile in Milan. It can be used for different purposes, depending on the client wishes. It can be a dining table, a convention or a family meeting table. The table is provided with a motoring device that allows the Lazy Susan to spin around at a constant speed. The motoring device has been entirely studied and realized by Bazzi Interior Decoration; its speed is adaptable, it can run faster or slower depending on the customer needs.

The dimension and the finishing of the table top are customizable too, as it is common in the Company's production; the client can select the materials he prefers, change the inlays colors and shape and select her favorite precious stones.

In our original proposal, the inlay on the top of the table is made with madrona wood veneer, Persian walnut burl and real mother of pearl. The base is 100% massive wood and 100% Made in Italy; it has entirely been studied and realized by our artisans in our factory in Camnago, Brianza.

Dimensions: diam.330 H80 cm (customizable)
