

Rift

Rift, designed by Ludovica+Roberto Palomba with Matteo Fiorini, is a new radiator with a minimalist elegance, an excellent solution for designers who can compose it and benefit from its modularity.

Rift is made up of two models in extruded aluminium which can be combined to make up compositions which fit perfectly into any architectural space: they can be arranged horizontally or vertically, aligned, unaligned or inverted in order to form compact, symmetrical or asymmetrical sculptures.

Its versatility is further enhanced by a range of accessories which includes shelves and towel rails which are ideal for the bathroom environment. The greatest new feature of Rift, which makes it the perfect radiator for renovations, is a great patented technical innovation relating to installation which is much simpler than for traditional radiators. In fact, the plumbing system for Rift occurs by means of a single collector with flexible inter-axis and precise inter-axis is no longer necessary for connection.

Rift is available in electric and hydraulic versions.
