

## Smart

Steel towel warmer that stands out for its extensive flexibility of use: indeed, it is available in versions for hydraulic, electrical or mixed systems. This product is created with tubes arranged horizontally and evenly spaced. The tubes have been designed for optimal positioning of towels. The heating elements have progressively abandoned their traditional round shape, taking on a tubular shape with a 15 mm square section. It is available in all the RAL colours in the Tubes range, and in four different heights, up to a maximum of a generous 175 cm, which is unconventional for Tubes towel warmers. The Smart model is supplemented by the range of accessories designed specifically for the Basics collection.
